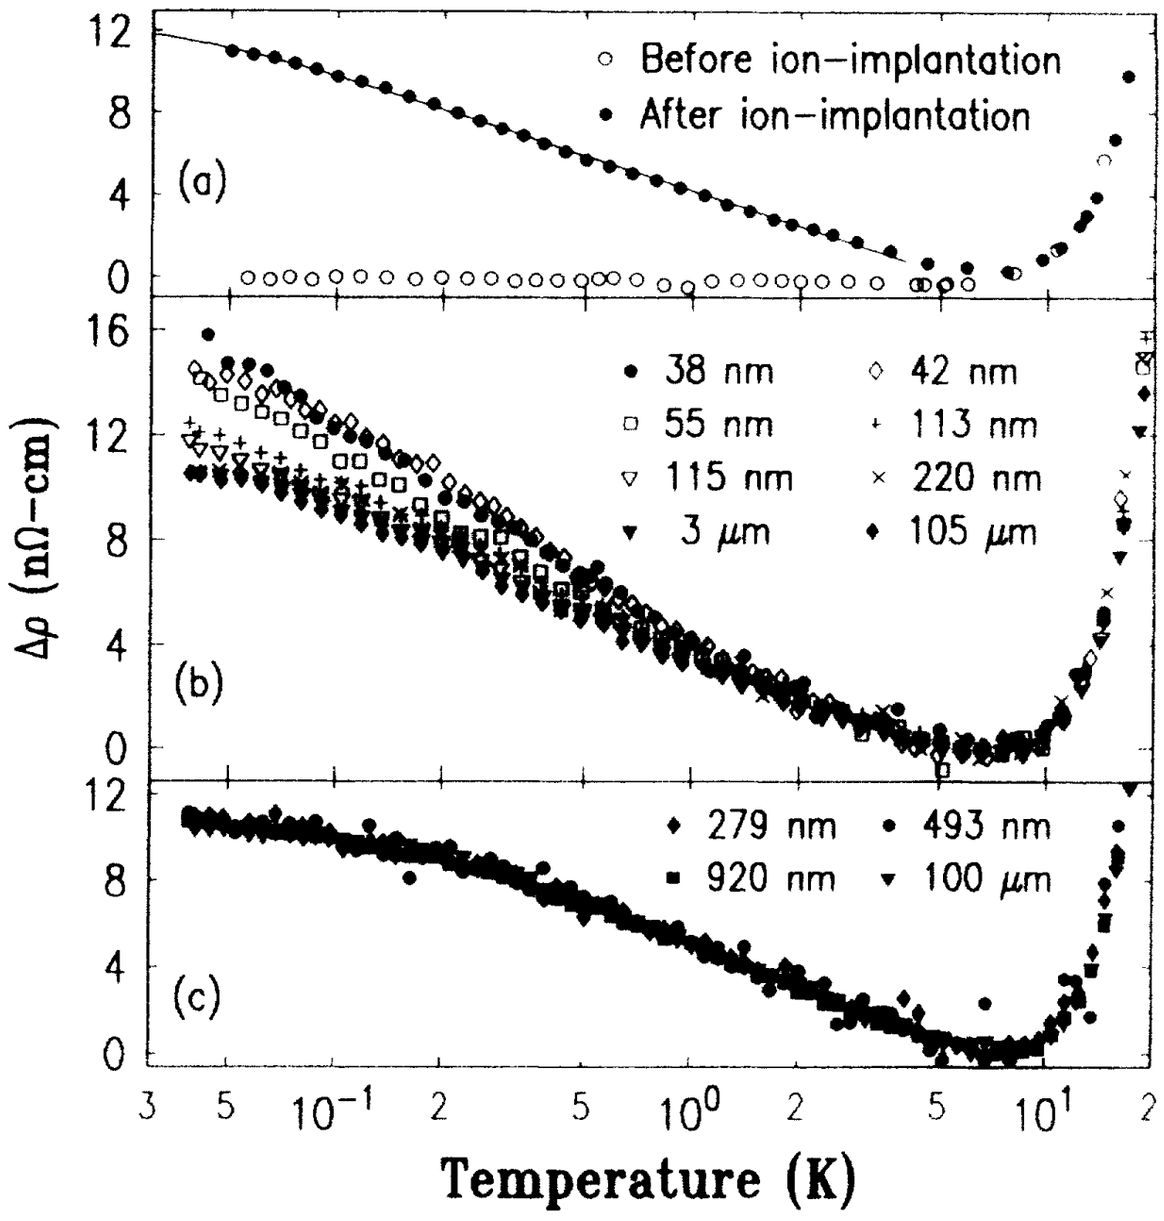
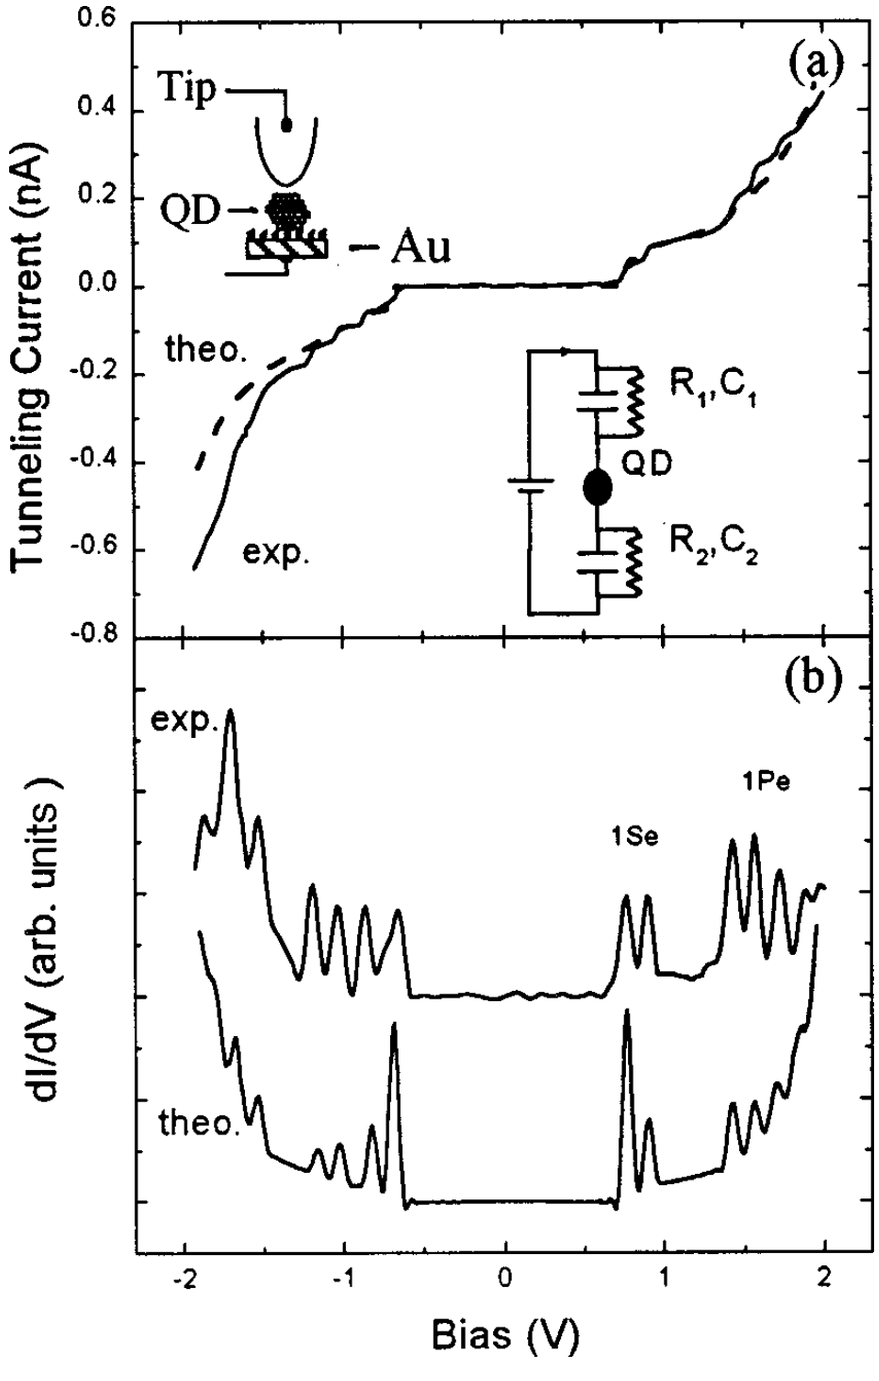
Kondo effect

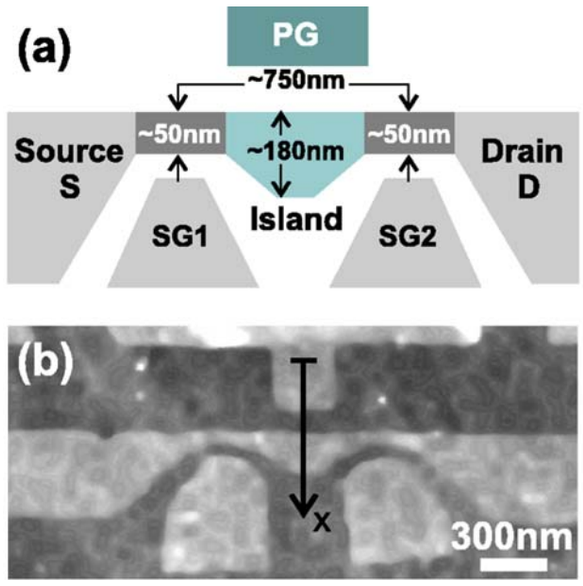


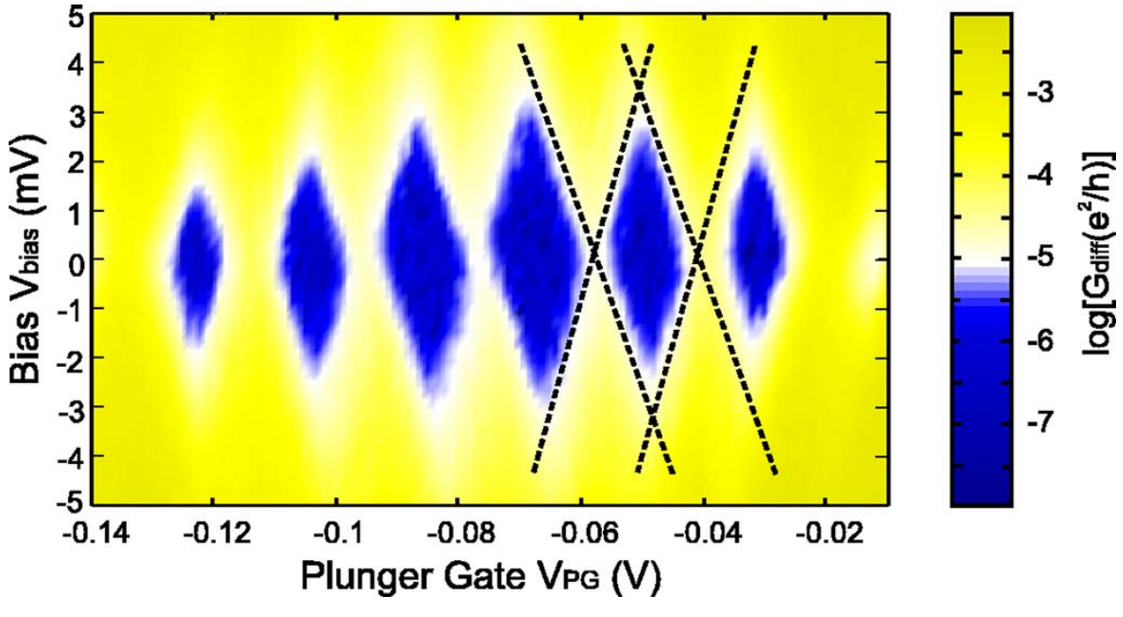
Tunneling through quantum dots

small dots - resonant tunneling



larger dots - Coulomb blockade



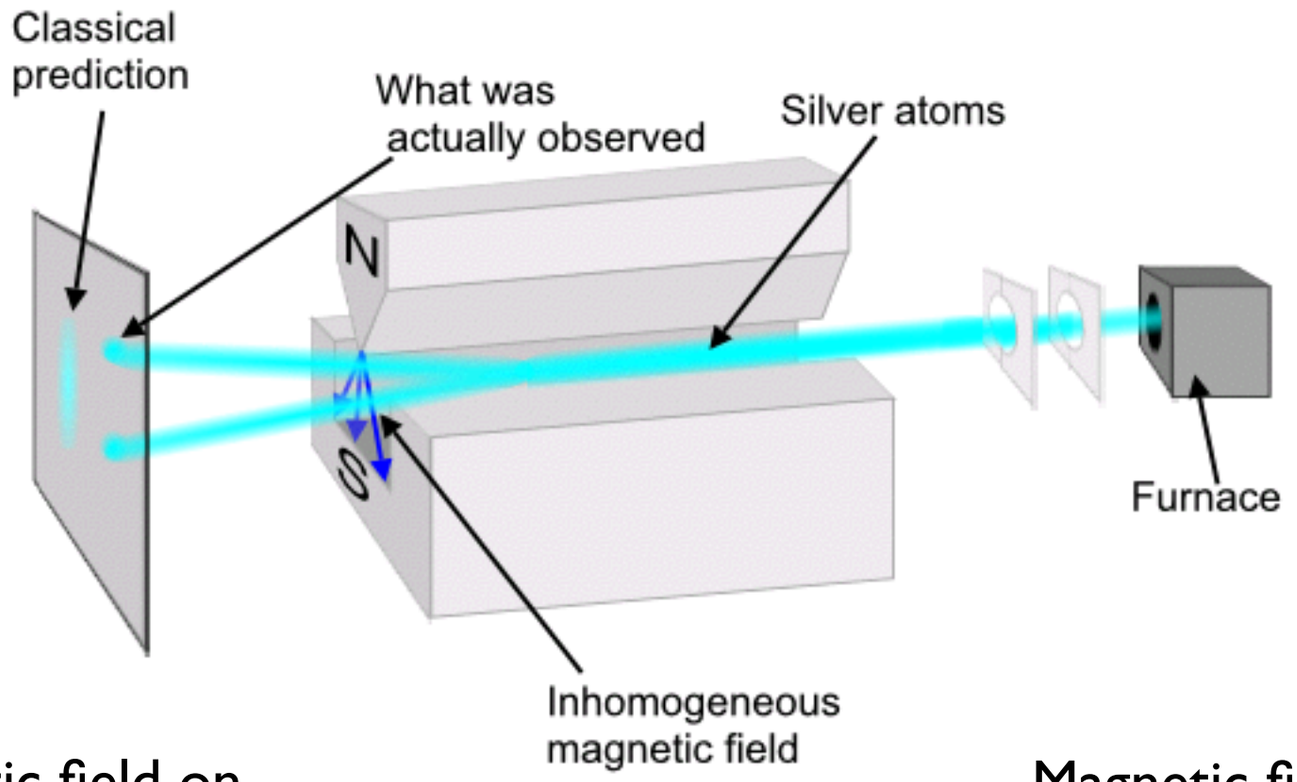


Spin in Stern-Gerlach experiment

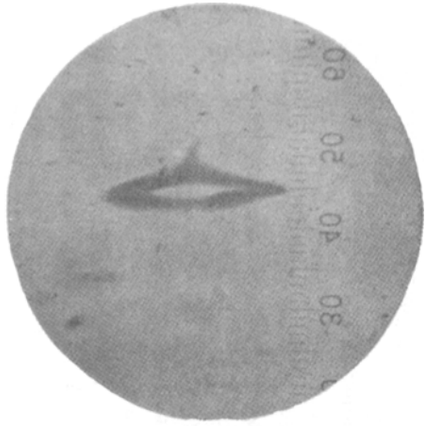
Der experimentelle Nachweis der Richtungsquantelung im Magnetfeld.

Von **Walther Gerlach** in Frankfurt a. M. und **Otto Stern** in Rostock.

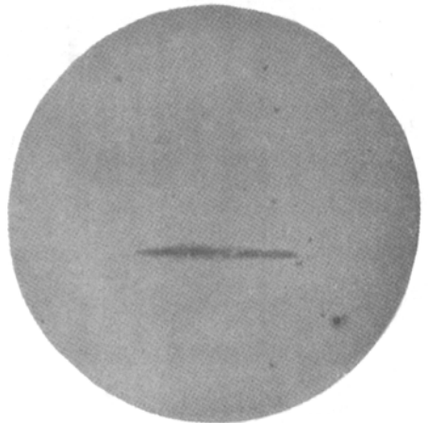
Mit sieben Abbildungen. (Eingegangen am 1. März 1922.)



Magnetic field on

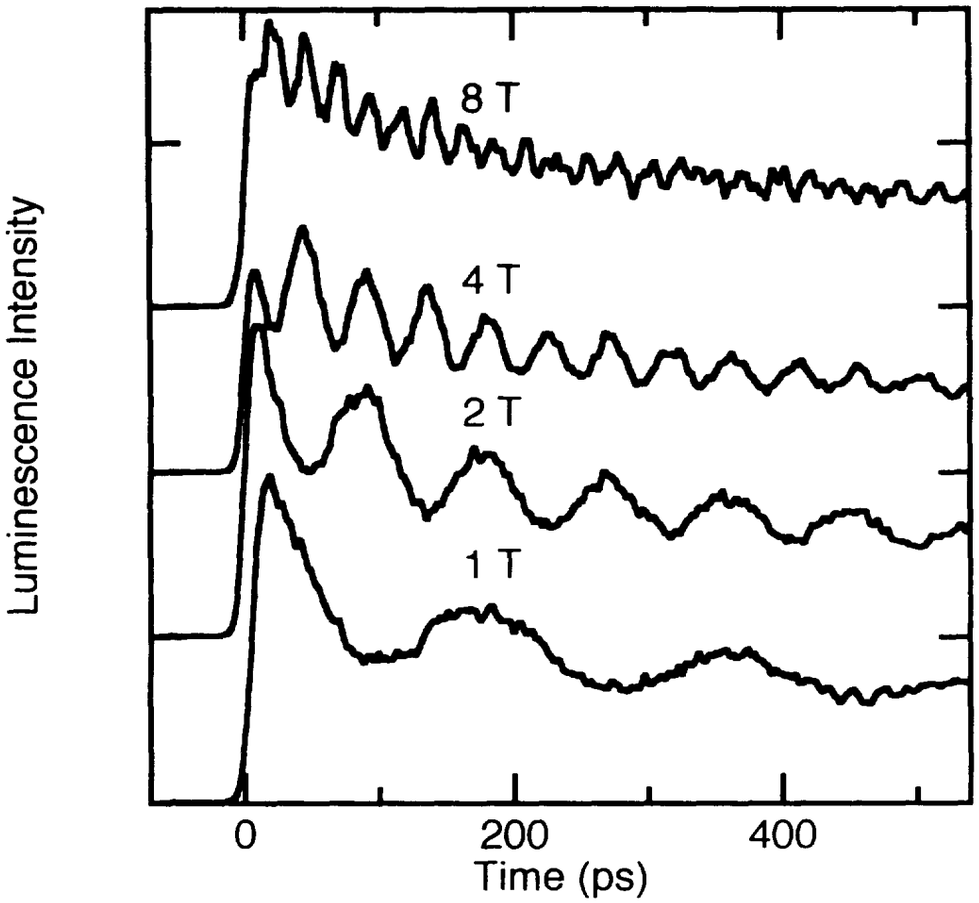


Magnetic field off



Spin precession in solid state devices: recombination of photo-excited spin-polarised electrons

$$\Omega_L = g\mu_B B/\hbar = eB/m \cdot g/2$$



- long spin coherence times (500 ps)
- determination of Lande *g*-factor (here, on a quantum well)

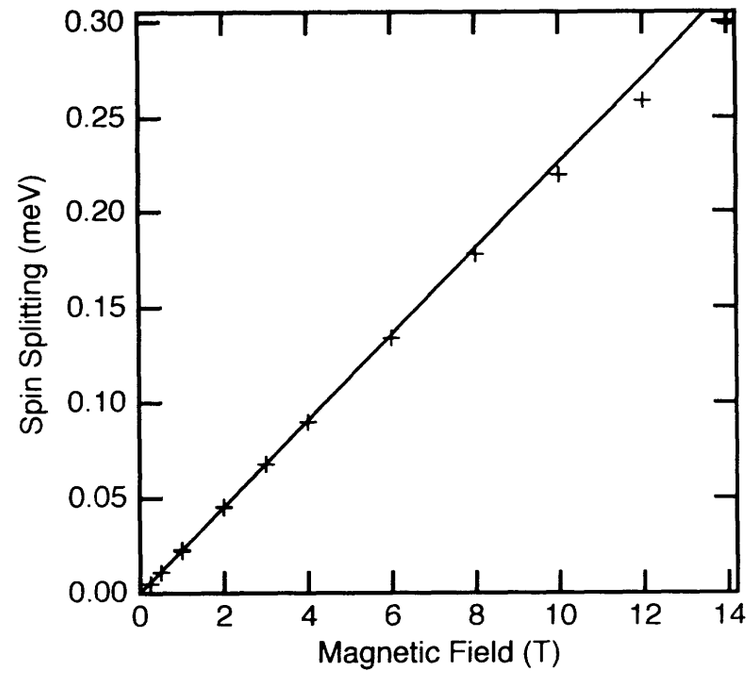


FIG. 4. Dependence of the electron spin splitting on the applied magnetic field (crosses), and spin splitting expected for a constant g factor of -0.390 (line).

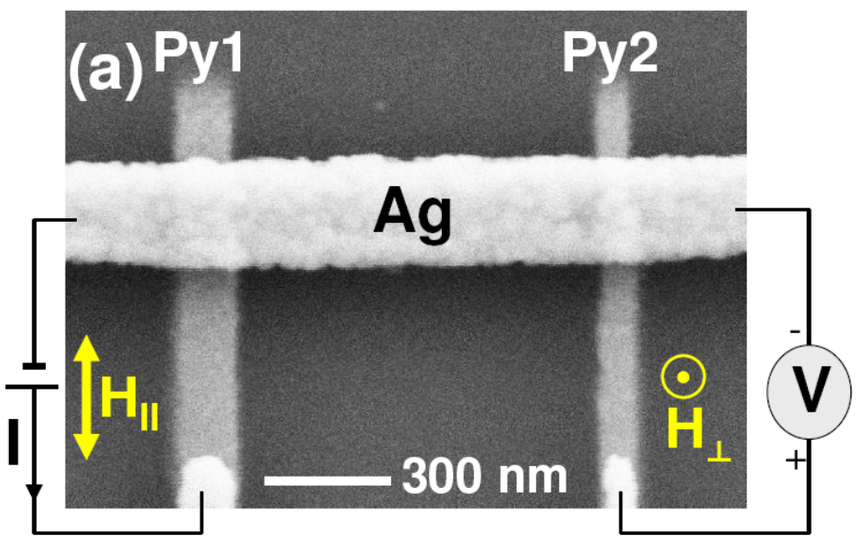
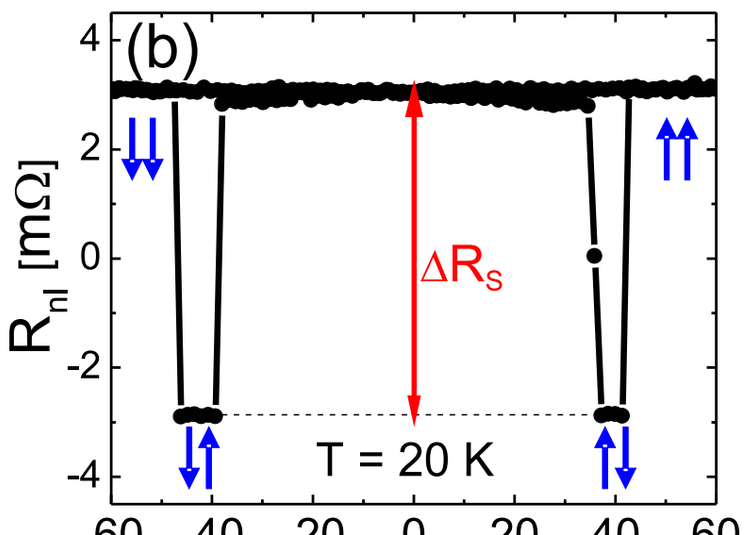
Spin precession in solid state devices: Hanle effect

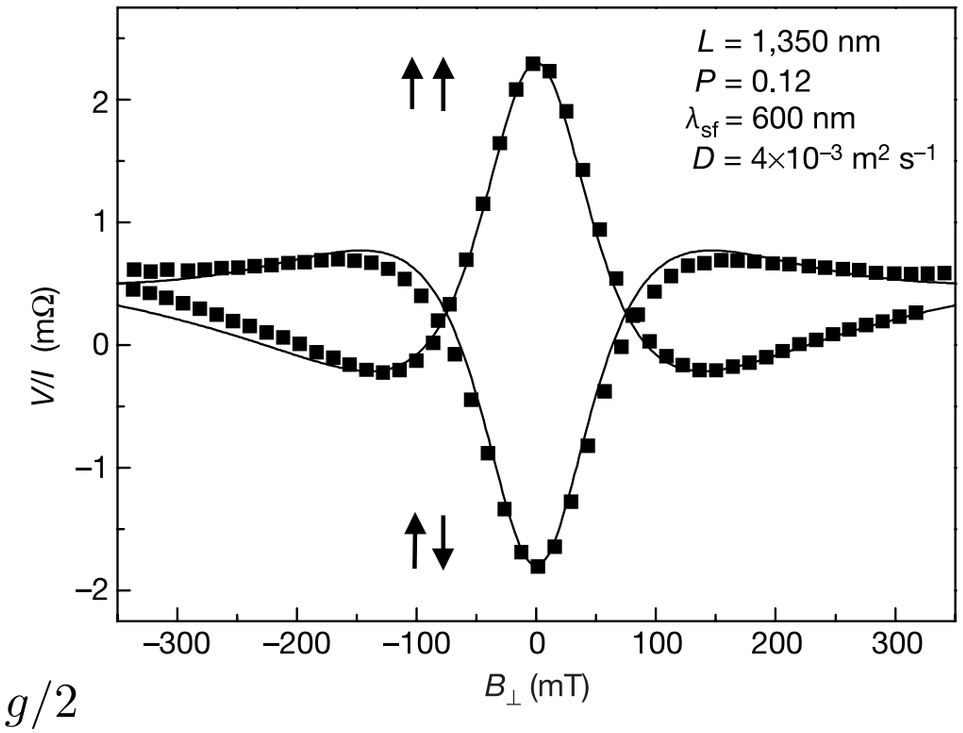




Original idea probably by Johnson & Silsbee, PRL 55, 1790 (1985)

PRL 104, 237202 (2010)

Here from Nature 416, 713 (2002)



$$V(B_\perp) = \pm I \frac{P^2}{e^2 N_{\mathrm{Al}} A} \int_0^\infty P(t) \cos(\omega_{\mathrm{L}} t) \exp(-t/\tau_{\mathrm{sf}}) \mathrm{d}t$$

$$P(t) = \frac{1}{\sqrt{4\pi D t}} \exp[-L^2/4Dt] \qquad \Omega_L = g\mu_B B/\hbar = eB/m \cdot g/2$$

Topics for the bonus lecture (role of spin in transport):

- multilayers (GMR, TMR…)
- SOI-related effects:
  - ✦ Edelstein effect, SOT
  - ✦ AMR (and AHE)
  - ✦ SHE, QSHE (topological insulators)

Abbreviations explained: giant/tunneling magnetoresistance (GMR/TMR), spin-orbit interaction (SOI), anomalous Hall effect (AHE), anisotropic magnetoresistance (AMR) and (quantum) spin-Hall effect (Q)SHE.
